

# St. John's Cemetery Chapel

Columbia, SD

New 2,168 sq. ft. chapel / columbarium housing 3 floor crypts, 2 wall crypts, and 64 niches. The building is constructed with precast concrete wall panels made to simulate the look of wood siding, heavy timber roof trusses, stained glass windows, stainless steel doors, detailed millwork and casework, and a geothermal heating and cooling system. Especially unique to this project is a lead roof system, which is very rare in the United States, and had to be installed by an overseas contractor.
